Interpret Data Using Percentages, Comparisons, and Trends

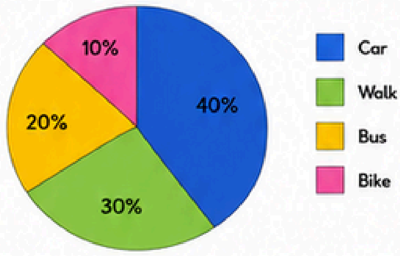
SDA UEMS Step 9

⭐ I can interpret data using percentages, comparisons, and trends to answer questions.

1 Let's Look

A class collected data about how students travel to school.

How Students Travel to School



Number of Students	
Car	20
Walk	15
Bus	10
Bike	5
Total	50

Talk About It

- Which way is most popular?
- Which way is least popular?
- What percentage of students walk?
- How many more students travel by car than by bike?
- What question could we ask about this data?

____

Key Words

percentage – parts out of 100
trend – a change over time
increase – get bigger
decrease – get smaller
more than – a greater amount
less than – a smaller amount
compare – look at similarities or differences

2 Let's Try

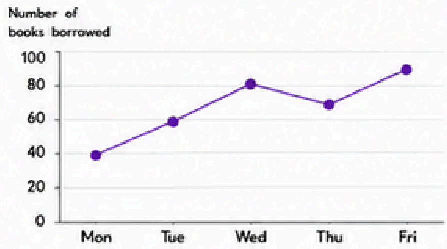
Read each display and answer the questions.

A. Favourite Fruit

Fruit	Number of students	Percentage
	18	36%
	12	24%
	10	20%
	10	20%
Total	50	100%

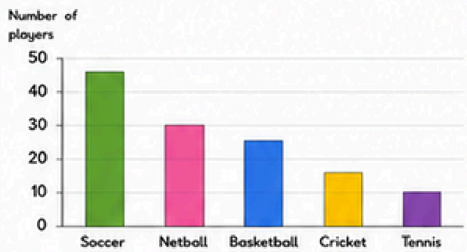
a. Which fruit is most popular? ____________
b. Which fruit is least popular? ____________
c. What percentage of students like grapes? ______
d. How many more students like apples than oranges? ______

B. Weekly Library Borrowings



a. On which day were the most books borrowed? ______
b. On which day were the least books borrowed? ______
c. How did the number of books borrowed change from Monday to Wednesday? ____________
d. How did the number of books borrowed change from Wednesday to Friday? ____________

C. Sports Players

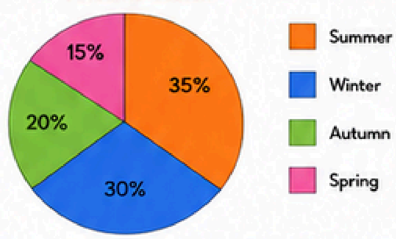


a. What percentage of players play soccer? ______
b. What percentage of players play cricket or tennis? ______
c. How many more players play netball than tennis? ______
d. Compare soccer and basketball using a percentage. ____________________

3 Let's Do

Answer the questions using the display.

Favourite Season



a. Which season is the most popular? ____________________
b. Which season is the least popular? ____________________
c. What percentage of students like winter? ____________________
d. What is the difference in percentage between summer and autumn? __________%
e. If 40 students like summer, how many students were surveyed in total? ____________
f. How many students prefer spring? ____________________
g. Is more than half of the class's favourite season either summer or autumn? ____________
Explain your answer. ____________________
h. Write a simple data claim about the information. ____________________

____

Think About It

- Can we say that most students prefer the warmer seasons? Use the percentages to explain your answer.

____

____

____

- How could this data change over time?

____

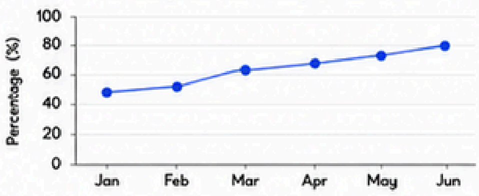
____

4 Challenge

Read the scenario and answer the questions.

A school runs a recycling program. The graph shows the percentage of waste recycled each month.

Percentage of Waste Recycled Each Month



a. What was the recycling percentage in January? ____________
b. What was the recycling percentage in June? ____________
c. Did the recycling percentage increase or decrease over the six months? ____________________
d. By how many percentage points did the recycling increase from January to June? ____________________
e. What was the mean (average) recycling percentage for the six months? ____________________ %
f. Write a data claim about the trend in recycling over the six months. ____________________

____

Extended Task

Create your own survey question.
Collect data from at least 20 people.

- Display the data appropriately.
- Include percentages.
- Write three questions and answer them.
- Write a data claim using evidence from your data.

My Learning Check

How did I go today?

I can do it! | Almost there! | I need more help. | This was hard.

Circle a face.

Parent Observation (optional)

Tick what you saw today.

- ☐ Interpreted data using percentages
- ☐ Compared data and described trends
- ☐ Made simple data claims with evidence
- ☐ Answered questions using graphs and tables
- ☐ Needed support
