

Use Grids, Coordinates, and Simple Transformations

Today I am learning to use grids, coordinates, and simple transformations.

Step 6

Early Elementary

1. Find the Location

Look at the grid.

a) Where is the dog?

Answer: _____

b) Where is the car?

Answer: _____

c) Where is the house?

Answer: _____

d) Where is the star?

Answer: _____

2. Place the Object

Draw the shapes on the grid.

a) A circle at B2

b) A square at C3

c) A triangle at D1

d) A star at A4

3. Follow the Coordinates

Plot the points. Connect them in order.

What shape do they make?

Plot the points. Connect them in order.

What do you notice?

4. Slide the Shape

a) Move the square 2 spaces right.

b) Move the triangle 1 space up.

5. Flip the Shape

A mirror line is shown. Complete the reflected shape.

6. Turn the Shape

Rotate the arrow as shown.

a) Quarter turn clockwise

b) Half turn

c) Quarter turn anticlockwise

7. Create Your Own Grid Picture

Use at least:

- 2 squares
- 2 triangles
- 2 circles

Plot your shapes on the grid.

Write the coordinates of your shapes.

- : (,)
- : (,)
- : (,)
- : (,)
- : (,)
- : (,)

8. Think and Talk

- a) What is a coordinate?

- b) What happens when a shape slides?

- c) What happens when a shape flips?

I can...

- ☐ find locations on a grid.
- ☐ plot points using coordinates.
- ☐ slide, flip, and turn shapes.
- ☐ create pictures on a grid.
- ☐ describe what transformations do.

Coordinate Reminder

We write coordinates as (letter, number).

Transformation Words

- slide**

moves in a straight line
- flip**

turns over a mirror line
- turn**

rotates around

Great job!

You are a grid explorer!
