

Use Tables or Diagrams to Compare Related Quantities

Step 5

Elementary
(Grades 2–3)

Today I am learning to use tables or diagrams to compare related quantities.

1. Complete the Tables

Look at the rule and complete the tables.

a) Rule: Each shape has 2 sides.

Number of shapes	1	2	3	4	5
Total number of sides	2				

b) Rule: Each flower has 5 petals.

Number of flowers	1	2	3	4	5
Total number of petals	5				

c) Rule: Each bag has 6 apples.

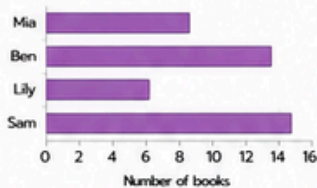

Number of bags	1	2	3	4	5
Total number of apples	6				

4. Use a Diagram to Compare

Look at the diagram and answer the questions.

a) The bar chart shows the number of books read by each student.

- Who read the most books? _____
- Who read the fewest books? _____
- How many more books did Sam read than Lily? _____
- How many books did Mia and Ben read altogether? _____

b) The pictograph shows the number of goals scored by each team.

Team	Number of goals
Tigers	4
Bears	3
Eagles	5
Sharks	2

= 2 goals

- Which team scored the most goals? _____
- Which team scored the fewest goals? _____
- How many goals did the Eagles score? _____
- How many more goals did the Tigers score than the Sharks? _____

2. Read the Table and Answer

A group of friends collect stickers.

The table shows how many stickers they collect each day.

Day	1	2	3	4	5
Number of stickers	4	8	12	16	20

- How many stickers did they collect on Day 3? _____
- How many stickers did they collect on Day 5? _____
- How many more stickers on Day 4 than Day 2? _____
- What is the rule for this table? _____
- If they keep collecting stickers following the rule, how many stickers will they have on Day 6?

3. Fill in the Missing Values

Use the table to find the missing values.

Number of packets	1	2	3	4	5
Total biscuits	3	6	9		15

Each packet has 3 biscuits.

Number of bottles	1	2	3	4	5
Total litres	2	4		8	10

Each bottle has 2 litres.

Number of boxes	1	2	3	4	5
Total pencils	5		15	20	

Each box has 5 pencils.

5. Real-Life Problems

Use a table or diagram to help you solve each problem.

- A recipe needs 1 cup of rice for 2 people. Complete the table to find how much rice is needed for more people.

Number of people	2	4	6	8	10
Cups of rice	1				

- A builder has 3 bricks in one layer. Complete the table to find how many bricks are needed for more layers.

Number of layers	1	2	3	4	5
Number of bricks	3				

- A tap fills a tank with 5 litres of water every minute. Complete the table to find how much water is in the tank after more minutes.

Time (minutes)	1	2	3	4	5
Water (litres)	5				

I can...

- ☐ use tables to compare related quantities.
- ☐ use diagrams to compare related quantities.
- ☐ solve problems using tables and diagrams.
- ☐ explain my thinking.

Chance Words

- + **table** – a chart with rows and columns of numbers
- + **diagram** – a picture or chart that shows information
- + **compare** – look at two or more amounts to see how they are the same or different
- + **related** – connected or linked together

Great job!

You are using tables and diagrams to make smart comparisons!
