

Interpret Remainders in Context

Step 38

Today I am learning to interpret remainders in context.

1. What Does the Remainder Mean?

Solve each problem. Write what the remainder represents in the context.

Problem	Division Sentence	What the Remainder Represents
a) 25 students are seated in groups of 4 for a science activity. How many full groups can be made and how many are left over?	$25 \div 4 = \underline{\quad} R \underline{\quad}$	_____
b) A baker has 38 muffins. She puts 6 muffins in each box. How many full boxes can she fill and how many muffins are left?	$38 \div 6 = \underline{\quad} R \underline{\quad}$	_____
c) 57 stickers are shared equally among 8 friends. How many stickers does each friend get and how many are left over?	$57 \div 8 = \underline{\quad} R \underline{\quad}$	_____

2. Real-Life Situations

Solve each problem. Write a sentence to explain the remainder in the context.

a) A teacher has 73 pencils. She wants to pack them equally into bags of 10 pencils. How many full bags can she make? How many pencils will be left over? $73 \div 10 = \underline{\quad} R \underline{\quad}$ Explanation: _____	b) A bus holds 45 passengers. There are 6 seats in each row. How many full rows are filled? How many seats are left empty? $45 \div 6 = \underline{\quad} R \underline{\quad}$ Explanation: _____
c) A store has 92 apples. They put 8 apples in each basket. How many full baskets can be made? How many apples are left? $92 \div 8 = \underline{\quad} R \underline{\quad}$ Explanation: _____	d) A ribbon is 31 metres long. Pieces of the ribbon are cut into lengths of 6 metres. How many 6-metre pieces can be cut? How much ribbon will be left? $31 \div 6 = \underline{\quad} R \underline{\quad}$ Explanation: _____

3. Choose the Best Answer

Tick (✓) the answer that best explains the remainder.

a) 29 children form teams of 5. $29 \div 5 = 5 R 4$. What does the remainder 4 mean? ☐ 4 teams are made. ☐ 4 children are left without a team. ☐ Each team has 4 children.	b) 52 books are placed on shelves with 7 books on each shelf. $52 \div 7 = 7 R 3$. What does the remainder 3 mean? ☐ There are 3 shelves. ☐ 3 books are left that do not fill a shelf. ☐ Each shelf has 3 books.
c) A cake is cut into pieces of 8. There are 67 pieces in total. $67 \div 8 = 8 R 3$. What does the remainder 3 mean? ☐ There are 3 cakes left. ☐ There are 3 pieces left that do not make a full cake. ☐ Each cake has 3 pieces.	d) 86 marbles are shared equally among 9 bags. $86 \div 9 = 9 R 5$. What does the remainder 5 mean? ☐ 5 bags are used. ☐ 5 marbles are left that do not go into a bag. ☐ Each bag has 5 marbles.

4. Challenge

Create your own real-life problem that involves a remainder. Solve it and explain what the remainder represents.

My problem: _____
Division sentence: _____ What does the remainder represent? _____

My Learning Check

I can do it!

Almost there!

I needed help.

This was hard.

Circle a face.

Parent Observation (optional)

- | | |
|--|--|
| ☐ Understood the concept | ☐ Neat and organized work |
| ☐ Chose correct strategies | ☐ Worked independently |
| ☐ Explained remainders in context | ☐ Needed some support |
| ☐ Solved problems accurately | ☐ Demonstrated understanding verbally |

Notes: _____
