

Choose efficient strategies across different number forms

Use number sense to choose the most efficient strategy across different number forms.

Step 9

Early Elementary

★ Today I am learning to choose efficient strategies across different number forms.

1. Look at the Same Value in Different Forms

Write the missing form.

a) 346 Word form: _____ Expanded form: ____ + ____ + ____ Place value form: 300 40 6	b) 728 Word form: _____ Expanded form: ____ + ____ + ____ Place value form: 700 20 8	c) 1,253 Word form: _____ Expanded form: ____ + ____ + ____ Place value form: 1,000 200 50 3	d) 2,416 Word form: _____ Expanded form: ____ + ____ + ____ Place value form: 2,000 400 10 6
---	---	---	---

2. Choose the Most Efficient Strategy

Tick the strategy you would use. Then solve.

a) 198 + 57 = _____ ☐ Count on (by ones) ☐ Make a ten ☐ Add hundreds, tens, ones ☐ Use place value compensation Answer: _____	b) 463 - 217 = _____ ☐ Count back (by ones) ☐ Break apart (hundreds, tens, ones) ☐ Use compensation (adjust) ☐ Use place value partitioning Answer: _____	c) 25 × 4 = _____ ☐ Repeated addition ☐ Use known facts (5 × 4) ☐ Arrays or equal groups ☐ Use doubling Answer: _____	d) 672 ÷ 3 = _____ ☐ Share equally ☐ Use multiples of 3 ☐ Partial quotients ☐ Use place value Answer: _____
---	---	---	---

3. Convert and Solve

Convert if needed. Then solve using an efficient strategy.

a) 3 tens + 8 ones + 5 hundreds = _____ Then solve: _____ + 27 = _____ Strategy I used: _____	b) 4 hundreds + 19 tens + 6 ones = _____ Then solve: _____ - 158 = _____ Strategy I used: _____	c) 0.6 + 0.38 = _____ Write as decimals. Strategy I used: _____	d) \$12.50 + \$8.75 = _____ Write in dollars and cents. Strategy I used: _____
--	--	--	---

4. Real-Life Problems - Choose the Best Strategy

Read each problem. Choose the most efficient strategy and solve.

a) A shop sold 248 apples in the morning and 176 in the afternoon. How many apples in total?  I will use: ☐ Count on ☐ Make a ten ☐ Add hundreds, tens, ones ☐ Use compensation Equation: _____ Answer: _____	b) A school had 685 pencils. They used 273 pencils. How many pencils are left?  I will use: ☐ Count back ☐ Break apart ☐ Use compensation ☐ Use place value Equation: _____ Answer: _____	c) A pack of 6 muffins costs \$7.20. How much do 4 packs cost?  I will use: ☐ Repeated addition ☐ Use known facts (×) ☐ Arrays or equal groups ☐ Use doubling Equation: _____ Answer: _____
--	--	--

5. Your Turn!

Write the problem in a different number form. Then solve.

a) Use a different number form. 562 → Then solve: 562 + 138 = _____ Strategy I used: _____	b) Use a different number form. 7 hundreds + 3 tens + 4 ones Then solve: 734 - 289 = _____ Strategy I used: _____	c) Use a different number form. 0.75 → Then solve: 0.75 + 0.48 = _____ Strategy I used: _____
--	---	---

My Learning Check Circle how confident you feel.

I can do it!

I need more practice.

I need help.

I used...

number sense

efficient strategy

different number forms

mental math

checking my answer

Today I learned...

1 thing I did well: _____

1 thing I will improve: _____
