

Compare Expected and Actual Outcomes

Step 6

 Early Elementary
 (Grades 1–2)

★ Today I am learning to compare expected and actual outcomes.

1. What Do You Expect?

Look at each chance event. Colour how many you expect to happen.

- a) Rolling a 1 on a number cube.

- b) Spinning a spinner below.

- c) Picking a green counter from the bag.

2. Do the Activity and Record Results

Do each activity the number of times shown and record your results.

- a) Roll the number cube 10 times.

Number	1	2	3	4	5	6
Tally						
Total						

- b) Spin the spinner 12 times.

Colour	Red	Blue	Yellow	Green
Tally				
Total				

- c) Pick a counter from the bag 10 times.

Colour	Red	Blue	Green	Yellow
Tally				
Total				

3. Compare Expected and Actual

Compare what you expected with what actually happened.

- a) Number cube (10 rolls)

- Expected 1s: _____
- Actual 1s: _____
- Was it MORE, LESS or ABOUT THE SAME?

MORE

LESS

ABOUT THE SAME

- b) Spinner (12 spins)

- Red – Expected: _____ Actual: _____ MORE / LESS / SAME
 Blue – Expected: _____ Actual: _____ MORE / LESS / SAME
 Yellow – Expected: _____ Actual: _____ MORE / LESS / SAME
 Green – Expected: _____ Actual: _____ MORE / LESS / SAME

- c) Bag (10 picks)

- Green – Expected: _____ Actual: _____ MORE / LESS / SAME

4. Bar Graph: Expected vs Actual

Draw bar graphs to show your expected and actual results.

- a) Number cube – number of 1s

- b) Spinner – colours (out of 12)

5. Explain Your Thinking

Answer the questions using your results.

- a) Which activity was closest to what you expected? Why?

- b) Which activity was most different from what you expected? Why?

- c) If you do the same activity again, what might happen different?

6. Make a Prediction

Predict what you think will happen.

- a) If you roll the number cube 20 times, how many 3s do you think you will get? _____

- b) If you spin the spinner 20 times, how many times do you think it will land on yellow? _____

- c) If you pick a counter from the bag 20 times, how many times do you think you will pick green? _____

7. Challenge

You roll a number cube 30 times and get the results below.

Number	1	2	3	4	5
Total	8	2	4	6	5

- a) Which number happened the most? _____
- b) Which number happened the least? _____
- c) Why might some numbers happen more than others? _____

8. Real-Life Connection

Think about this situation.

It might rain on 2 out of 5 days this week.

- a) If the week has 7 days, how many rainy days do you expect? _____
- b) If it actually rained on 5 days, is that more, less or about the same as expected? _____

LESS

ABOUT THE SAME

I can...

- ☐ make predictions about chance.
- ☐ record results from repeated trials.
- ☐ compare expected and actual outcomes.
- ☐ explain my thinking.
- ☐ use graphs to show results.

Chance Words

Great job!

 You are comparing
 expected and
 actual outcomes!
