

Choose Precision and Conversions Purposefully

Step 9

Upper Elementary

Today I am learning to choose appropriate precision and use conversions purposefully to solve problems.

1. Choose the Best Unit

Circle the most appropriate unit.

a) Length of a classroom

cm m km

b) Mass of a watermelon

g kg t

c) Capacity of a drink bottle

mL L kL

d) Distance between two towns

cm m km

2. Convert the Measurement

Convert each measurement.

a) 250 cm = _____ m

b) 3.5 m = _____ cm

c) 1500 mL = _____ L

d) 2.5 L = _____ mL

e) 4500 g = _____ kg

f) 1.2 kg = _____ g

Helpful Conversions

- 100 cm = 1 m • 1 m = 100 cm
- 1000 mL = 1 L • 1 L = 1000 mL
- 1000 g = 1 kg • 1 t = 1000 kg

3. Which Measurement Is More Precise?

Circle the more precise measurement.

a) 2 m or 2.35 m

b) 1 L or 1.25 L

c) 5 kg or 5.4 kg

d) 10 cm or 10.2 cm

A measurement with more digits (especially decimals) is usually more precise.

4. Real-Life Conversion Problems

Solve the problems.

a) A ribbon is 250 cm long. Write this in metres.

Answer: _____ m

b) A bottle contains 1.5 L. Write this in millilitres.

Answer: _____ mL

c) A package weighs 32 kg. Write this in grams.

Answer: _____ g

5. Which Answer Makes Sense?

Circle the sensible answer.

a) A pencil is:

15 cm or 15 m

b) A swimming pool holds:

50 L or 50 kL

c) A dog weighs:

25 kg or 250 kg

d) A trip between cities is:

300 km or 300 cm

6. Measurement Challenge

Solve the word problems.

a) A rope is 3.5 m long. 75 cm is cut off. How much remains?

Answer: _____ m

b) A tank contains 4 L. 1.25 L is used. How much remains?

Answer: _____ L

c) A parcel weighs 2.8 kg. Another parcel weighs 1.5 kg. What is the combined mass?

Answer: _____ kg

7. Precision Investigation

Look at the measurements in the table.

Object	Measurement
Pencil	17.4 cm
Book	24.8 cm
Desk	1.25 m

a) Which measurement is the most precise?

b) Why might precision matter in measurement?

8. Think and Explain

Write your answers in the space provided.

a) When should you use a more precise measurement?

b) Why are conversions useful?

c) How do you decide which unit to use?

I can...

- ☐ choose appropriate units
- ☐ use precision when needed
- ☐ convert between units
- ☐ solve real-life measurement problems

Measurement Words

cm

m

km

mL

L

g

kg

precision

convert
