

Multiply and Divide Larger Whole Numbers Using Efficient Strategies

Step 37

★ Today I am learning to multiply and divide larger whole numbers using efficient strategies.

1. Multiply Efficiently

Use a helpful strategy to solve each multiplication.

a) $23 \times 4 =$

Strategy: break apart,
known facts, or
place value

b) $36 \times 3 =$

Strategy: break apart,
known facts, or
place value

c) $48 \times 5 =$

Strategy: break apart,
known facts, or
place value

d) $125 \times 6 =$

Strategy: break apart,
known facts, or
place value

2. Divide Efficiently

Use known facts, grouping or partitioning to solve.

a) $84 \div 4 =$

How I solved it: _____

b) $96 \div 3 =$

How I solved it: _____

c) $125 \div 5 =$

How I solved it: _____

d) $144 \div 6 =$

How I solved it: _____

3. Choose the Best Strategy

Circle the strategy that would help most, then solve.

a) $39 \times 2 =$

double

skip count

guess

b) $150 \div 5 =$

known facts

draw all

guess

c) $48 \times 10 =$

place value

count by ones

guess

d) $240 \div 4 =$

partition

guess

count by ones

4. Solve the Problems

Read the problems. Use an efficient strategy. Write the answer.

- a) A school buys 24 packs of pencils. There are 5 pencils in each pack. How many pencils are there altogether?

- b) A library has 168 books to place equally on 6 shelves. How many books go on each shelf?

- c) A farmer packs 32 boxes with 4 oranges in each box. How many oranges are packed?

- d) A factory has 180 toy parts. They are shared equally into 9 trays. How many parts go in each tray?

My Learning Check

Circle a face.

I can do it!

Almost there!

I needed help.

This was hard.

Parent Observation (optional)

- ☐ Multiplied larger whole numbers accurately
- ☐ Divided larger whole numbers accurately
- ☐ Chose efficient strategies
- ☐ Solved word problems accurately

- ☐ Needed support
- ☐ Demonstrated understanding verbally

Notes: _____
