

Today I am learning to make sensible estimates and check measurements using appropriate tools.

1. Estimate First

Look at each object. Make a sensible estimate.

a) Pencil

I think it is:

_____ cm long

b) Book

I think it is:

_____ cm long

c) Door

I think it is:

_____ cm tall

d) Juice bottle

I think it holds:

_____ L

2. Estimate or Measure?

Circle the better choice.

a) How long is the classroom?

Estimate

Measure

b) How long is your pencil?

Estimate

Measure

c) How many litres fit in a swimming pool?

Estimate

Measure

d) How heavy is an elephant?

Estimate

Measure

3. Check the Measurement

Estimate first, then compare.

	Estimate	Actual	Difference
a) Pencil 	_____ cm	8 cm	☐ Close ☐ Not Close
b) Book 	_____ cm	20 cm	☐ Close ☐ Not Close
c) Water bottle 	_____ mL	600 mL	☐ Close ☐ Not Close

4. Which Estimate Makes Sense?

Circle the sensible estimate.

- a) A pencil is: 8 cm or 80 cm
- b) A dog weighs: 20 kg or 200 kg
- c) A drink bottle holds: 600 mL or 600 L
- d) A classroom is: 8 m or 80 m

5. Measure and Record

Use a ruler to measure.

	Estimate	Actual (measured)
a) Length of your pencil 	_____ cm	_____ cm
b) Length of your eraser 	_____ cm	_____ cm
c) Length of your book 	_____ cm	_____ cm

6. Which Is Closest?

Circle the estimate that is closest to the actual measurement.

- a) Actual length = 10 cm
5 cm 9 cm 20 cm
- b) Actual capacity = 1 L
100 mL 900 mL 10 L
- c) Actual mass = 5 kg
1 kg 4 kg 20 kg

7. Real-Life Estimation

Estimate first, then check.

a) How many steps from the classroom to the playground?

Estimate: _____ steps

Check: _____ steps

b) How many books fit on a shelf?

Estimate: _____ books

Check: _____ books

c) How many cups of water fill this jug?

Estimate: _____ cups

Check: _____ cups

8. Think and Talk

Write your answer.

a) Why is estimating useful?

b) Why should we check our estimate?

c) When have you used estimation?

I can...

- ☐ make sensible estimates.
- ☐ choose the right tool and unit.
- ☐ measure and check.
- ☐ compare estimates with actual measurements.

length
centimetre (cm)

Measurement Words

mass
kilogram (kg)

capacity
litre (L) millilitre (mL)

time
minute (min)

Great job!
You are becoming
a great measurer!
